**ROTO-DISC INTRODUCES ROTO-VERT DIVERter VALVE
THAT HELPS PREVENT LEAKS, JAMS AND PRODUCT BREAKAGE**

Cincinnati, OH, November 12, 2003 - For Immediate Release – The Roto-Disc Company introduces its new Roto-Vert heavy-duty, clean flow diverter valve that helps prevent leaks, jams and product breakage from virtually anything that runs through a process line. Roto-Vert is effective in applications using sticky and gummy powders, abrasives, pellets, ores and granulated substances. The sanitary design is also appropriate for products used in the food or pharmaceutical industries.

As the valve dome rotates against the valve body seal, it allows for higher sealing preload and helps prevent leaks. When the dome slides against the seal in a scissor-like wiping action, it helps prevent product pinching or jamming.

Roto-Vert's body and dome are made of ductile iron, stainless steel, high alloy steel or aluminum, and for abrasive material, contact surfaces can be coated with Tungsten Carbide and/or Stellite®.

The Roto-Disc Company is a manufacturer and designer of sanitary, vacuum and pressure rotary dome valves for dry bulk applications. For more information about Roto-Disc products, please contact the Roto-Disc Company or visit its web site: www.rotodisc.com.
